Alligators and crocodiles have similar appearances, but there are ways to tell them apart. Alligators are black in color with a broad, rounded snout, while crocodiles have a more grayish or green appearance and a narrow, tapered snout. When an alligator's mouth is closed, only its upper teeth are exposed; in contrast, a crocodile's fourth tooth ...

70-year-old crocodile spotted in Punta Gorda backyard

Although they appear similar, crocodiles, alligators and the gharial belong to separate biological families. The gharial, with its narrow snout, is easier to distinguish, while morphological differences are more difficult to spot in crocodiles and alligators. The most obvious external differences are visible in the head, with crocodiles having narrower and longer heads, with a more V-shaped than a U-shaped snout compared to alligators and caimans.

Crocodile - Wikipedia

An alligator, 4 to 7 feet long, dragged the victim under water in the Seven Seas Lagoon about 9pm on June 14, 2016, at Disney's Grand Floridian Resort & Spa just outside ofT Orlando, Florida. His father and mother tried to rescue him; the father was attacked by a second alligator.
